PROFILE SUMMARY

Data analyst with experience applying SQL, Python, Excel, Power BI and Tableau to business and public health questions. Background includes medical equipment sales analysis, health data preparation and independent projects in bike-share usage, water access and movie recommendations. Skilled in data cleaning, exploratory analysis, trend analysis, reporting and visualization. Holds a BTech in Physics Electronics.

CORE COMPETENCIES

- Sales and product analysis
- Customer behavior analysis
- Data cleaning and transformation
- Exploratory and trend analysis
- Competitive analysis
- Predictive analysis
- SQL data analysis
- Reporting and dashboards
- Data visualization

Technical Proficiencies

SQL, Python (Pandas, Matplotlib, scikit-learn), Excel, Google Sheets, Power BI, Tableau, Jupyter Notebook, Git, Microsoft Fabric (Data Factory, OneLake, Dataflow Gen2, Lakehouse and Warehouse).

WORK EXPERIENCE

CONTRACT DATA ANALYST - Independent Client Projects

June 2024 - Present

- Cleaned and transformed health data for a researcher at the World Health Organization examining health conditions across West Africa.
- Prepared data on hospital deaths and causes, locations, medicine availability, hospital types, patient economic class and access to medical facilities for Power BI reporting; used SQL and Python for preparation and Git to manage project work.

SALES ANALYST - Chybuzu, Medical Equipment Supply Store, Ikeja

October 2022 - April 2024

- Analyzed equipment sales to identify fast-selling machine models and brands, and reviewed disposable products at risk of expiry due to low patronage.
- Examined why customers preferred new, lower-quality products over fairly used, higher-quality products, and conducted competitor and predictive analysis to identify business opportunities.
- Analysis of product types and brands informed stock decisions, helping the company avoid products unlikely to sell and at risk of damage in storage.

PROJECTS

CYCLISTIC BIKE-SHARE USAGE ANALYSIS

- Used SQL and Python (Pandas, Matplotlib and scikit-learn) in Jupyter Notebook to compare ride length, ride frequency, start times and weekday patterns for casual riders and annual members.
- Found that casual riders took longer rides, especially on weekends, while annual members used bikes more consistently; recommended weekend promotions, commuter benefits and location-based campaigns.

MAJI NDOGO WATER ACCESS ANALYSIS

April 2026

- Completed an end-to-end analysis of barriers to healthy drinking water access using SQL, Python, Excel and Power BI.
- Identified limited borehole availability, poor-quality materials and unreliable access as reasons residents relied on river and rainwater.

MOVIE RECOMMENDATION DATA PIPELINE - Microsoft Fabric Learning Project

- Built a pipeline using Data Factory, OneLake, Dataflow Gen2, Lakehouse, Warehouse and Power BI, working with user, movie, genre, cast, director, rating, watch-history, event and subscription data.
- Used ratings and watch history to identify user preferences and support movie recommendations.

EDUCATION

B.TECH IN PHYSICS ELECTRONICS - Federal University of Technology, Akure

2019

CERTIFICATIONS AND TRAINING

- Google Professional Data Analytics
- IBM Data Analytics Program
- ALX Data Analytics
- ALX Data Engineering
- ALX Data Science
